

Calling all Science teachers!

Are you interested in a **free, practical** CPD opportunity?

Would you like to improve:-

- ♦ the effectiveness of your Science lessons
- ♦ your use and range of practical work
- ♦ the use of APP in practical tasks

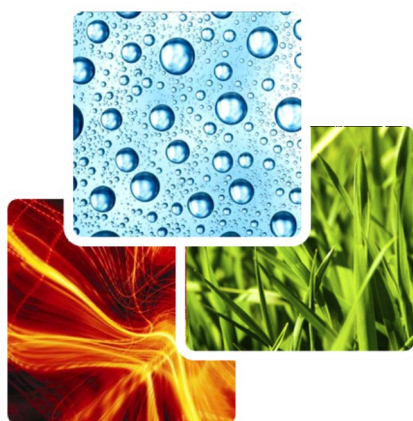

What previous delegates say about the course...

"Excellent balance of hands-on time and stimulating theory session"

"Has definitely improved my confidence and given me practical ideas for future work"

"This has helped me to re-assess why and how I am doing practical work"

Whatever your level of experience, this course could transform your practice and help improve your classes' experience of practical science. It will show you how to plan, rehearse and stage your practical activities to produce learning outcomes with impact.

Getting Practical is a reflective course, exploring the pedagogy behind practical science teaching, linking hands-on with **minds-on**. The course provides an important opportunity to network with colleagues, share good practice and develop new approaches, including the use of APP in assessment within Science

Participants will be introduced to new ways to evaluate their own teaching and receive advice on using a staging tool to manage the preparation and analysis of practical science sessions.

During the day, practical advice will be available from subject specialists to answer any existing questions. The use of models will be developed in addition to some novel solutions for the teaching of topics such as Forces, Space, Particles and Electricity .

To book a place contact Bruce Greig by phone or email (greighb@clyst-vale.devon.sch.uk)

by 3rd **March 2011**.

Thursday 10th March 2011

9am - 4pm
