

Calling all Science teachers!

This course could transform the effectiveness of your classroom practice and help improve your learners' experience of practical science. It will show you how to plan, rehearse and stage your practical activities to produce learning outcomes with impact.

Getting Practical

Gives science teachers an opportunity to reflect upon how they use practical work and, if necessary, make small changes to improve the effectiveness of their teaching.

Getting Practical is focusing on improving the:

- Clarity of the learning outcomes associated with practical work
- Effectiveness and impact of the practical work
- Sustainability of this approach for ongoing improvements
- Quality rather than quantity of practical work used
